Measuring Status and Change in NAEP Inclusion Rates of Students With Disabilities

INDIANA Fact Sheet

Key terms for tables and figures

Benchmark: a predicted inclusion rate for a state computed from the probability of inclusion of each student in that state based on the student's disability characteristics.

Nation-based approach: uses national averages to set benchmark inclusion rates for each type of student.

Jurisdiction-specific approach: uses averages in each jurisdiction to set benchmark inclusion rates for each type of student for that jurisdiction.

Status: the inclusiveness of a state or jurisdiction is measured by the difference between its actual inclusion rate and its nation-based benchmark inclusion rate in a given year.

Change: measured by change over time in the difference between a state's actual and benchmark inclusion rate. If a state is 1 point above its benchmark for inclusion in 2007 and 5 points above its benchmark in 2009 (and that change, 4 points, is statistically significant from zero) it is said to have become more inclusive from 2007 to 2009.
